

Do You Have These Water Problems?

• Hard Water

Hard water produces a scaly build-up on bathroom fixtures and shower doors; buildup can clog pipes and appliances. Hard water can cause skin irritation.

• Water Stains

Minerals in your water, such as iron or copper, can cause yellowy stains on toilets, bathroom fixtures and clothing making them much harder to clean.

• Water Odor

The source of the problem may be inside the house, your hot water heater. Or it could be outside, the air or ground your water comes in contact with.

• Bad Taste

Even though minerals in your water may not be harmful to you, they can make it taste bad.

Pentair Water Treatment is the premium supplier of Water Softener and Water Filtration components world-wide.
